STUDY OF NETWORK CABLES

AIM:

study of different type of network cables

a) understand differen type of network cables.

1. unshielded tirsted pain (UTP)
2. Shielded Tuirsted pair (STP)
3. coaxial cabel
4. Fibre optic cable.

cable type	category	maximum data transmission	advantages disadvantages	applicat use
UTP	category 3 category 5 category 5e	10GPS upto 100 MGPS 1GBPS	Advantages *) cheaper in cost *) Easy to install small diameter Disadvantages *) more prom to (EMI)	10 Ba Etern Fast ethern gigabit etherne Fast ether
STP	category 6/6a	10GBPS	Advantages * · shielded * Fasted than UTP	Gigabit Ethernet 10G Eth (55m)
SSTP	category 7	10GBPS .	Disadvantage *) Expensive *) Greater installation effort	Gigabi 10G Eth (100m)

Coaxial cable	RG-6 RG-59 RG-11	10-100mbps	advantages *) High transmit *) Immune to Interference *) versatile. Disadvantages *) Expensive *) greate Installation effort.	speed signal 500m televisi network High spe interne connecti
fibre optics cable	Single mode multi mode	100 Gbps	advantage *) high speed *) high bandwith *) high security disadvantages *) Expensive *) Requires	maxim distance fibre optics cable 100 meters

b) Tools and parts needed:

*) ethernet cabling - CAT5e is certified support, but CAT5 .cabling work as well over shorter distances.

*) A Crimpling tool. This is an all in one networking tools shaped to off the cables.

*) Two RJ 45 plugs

*) optional two plug shields.

Result:
=

Thus the different types of

are studied successfuly.
