LEARNING AND ASSIGNMENT OF IP ADDRESS MANUALLY TO COMPUTERS

AIM:

To understand IP addressing schems and manually assign static and manually addresses to computers on a network.

PROCEDURE:

*In windows: Open network and sharing center → change adapter settings → Right click set it manually.

* Enter IP Address: 192.168.1.10 Subnet Mask; 255.255.255.0. Default Gateway: 192.168.1.1

* Enter DNS server: 8.8.8.8 (Google DNS) click ok.

*In Linux: Use command 'studio ip route add 192.168.1.10/24 dev etho

* To set gateway in Linux: Sudo ip route add default 192.168.1.1

* For persistent configuration in linux edit/etc/network/interfaces on use nmd; on 'ip a'

* Verify the configuration using 'ipconfig'

* Ping the default gateway to confirm network connectivity

* Ping another computer on the same subset to verify communication.

COMMANDS / CODE

```
Sudo ip addr add 192.168.1.10/24 dev etho
Sudo ip route add default via 192.168.1.1
ip a show etho
ping 192.168.1.1
nmd con mod 'wired connection 1' ip v4.
addresses 192.168.1.10/24.
```

nmd con mod "wired communication" ipv4 method manual

nmd con up 'wired connection'".

RESULT:

Static IP addresses were successfully assigned to computers. Connectivity was verified using ping commands between hosts on the same subnet.
