Customize switch with network modules

Aim:

To customize a cisco switch by adding or removing network using cisco packet tracer and switch interface

Procedure:

*) open cisco packet tracer.

*) add a modular switch to the workspace.

*) open the physical tab and turn off the switch.

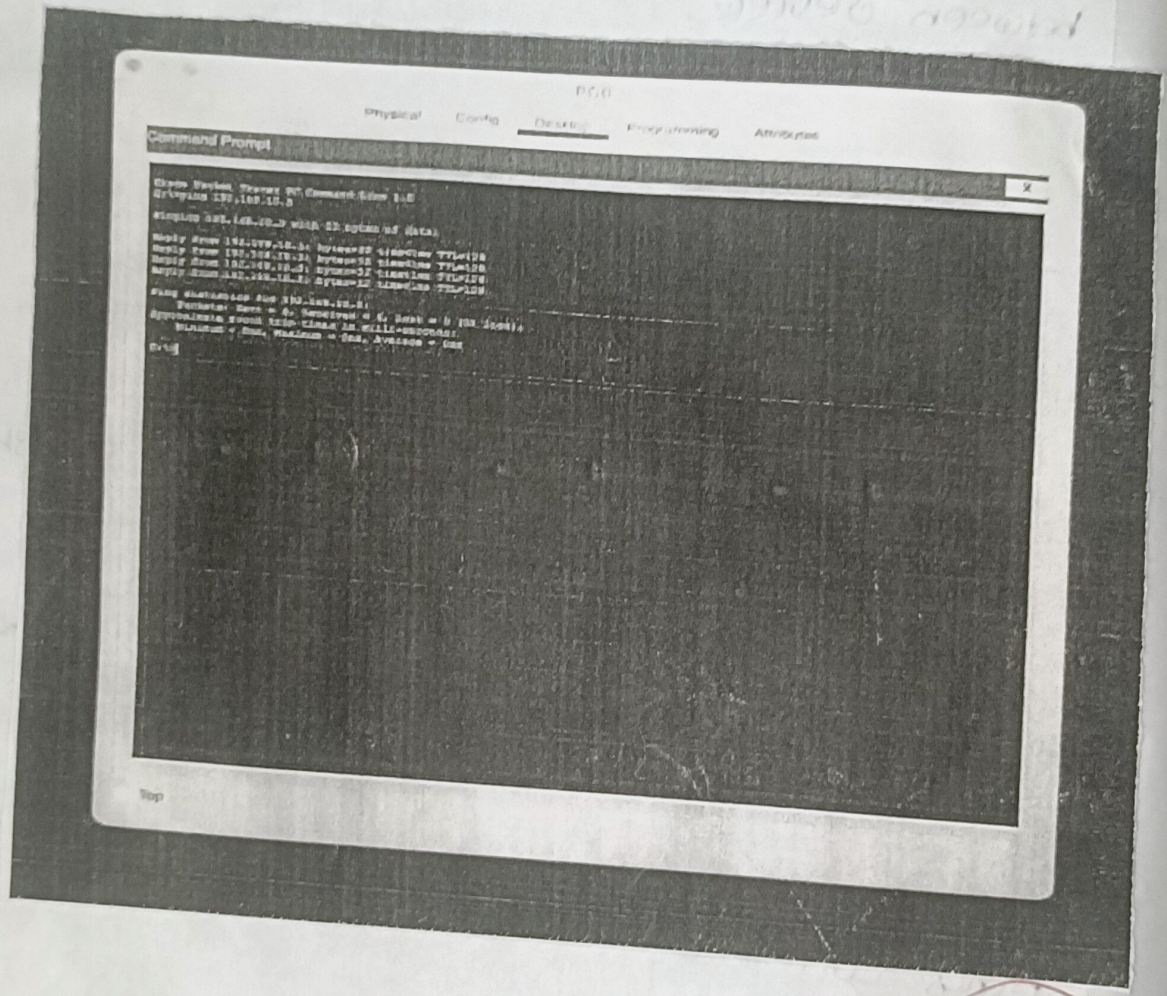

*) Remove the existing module if required

*) Turn on the switch and verify the interfaces.

*) Test connectivity between the PCs.

Result:

The switch was customized with and connectivity was verified
