Examine Network address translation (NAT) using cisco packet tracer

Aim:

To configure and examine network address translation using cisco packet tracer and verify communication between a private network

Procedure:

*) Open Cisco Packet Tracer and network device

*) Connect the devices and open router CLI

*) configure inside and outside interface

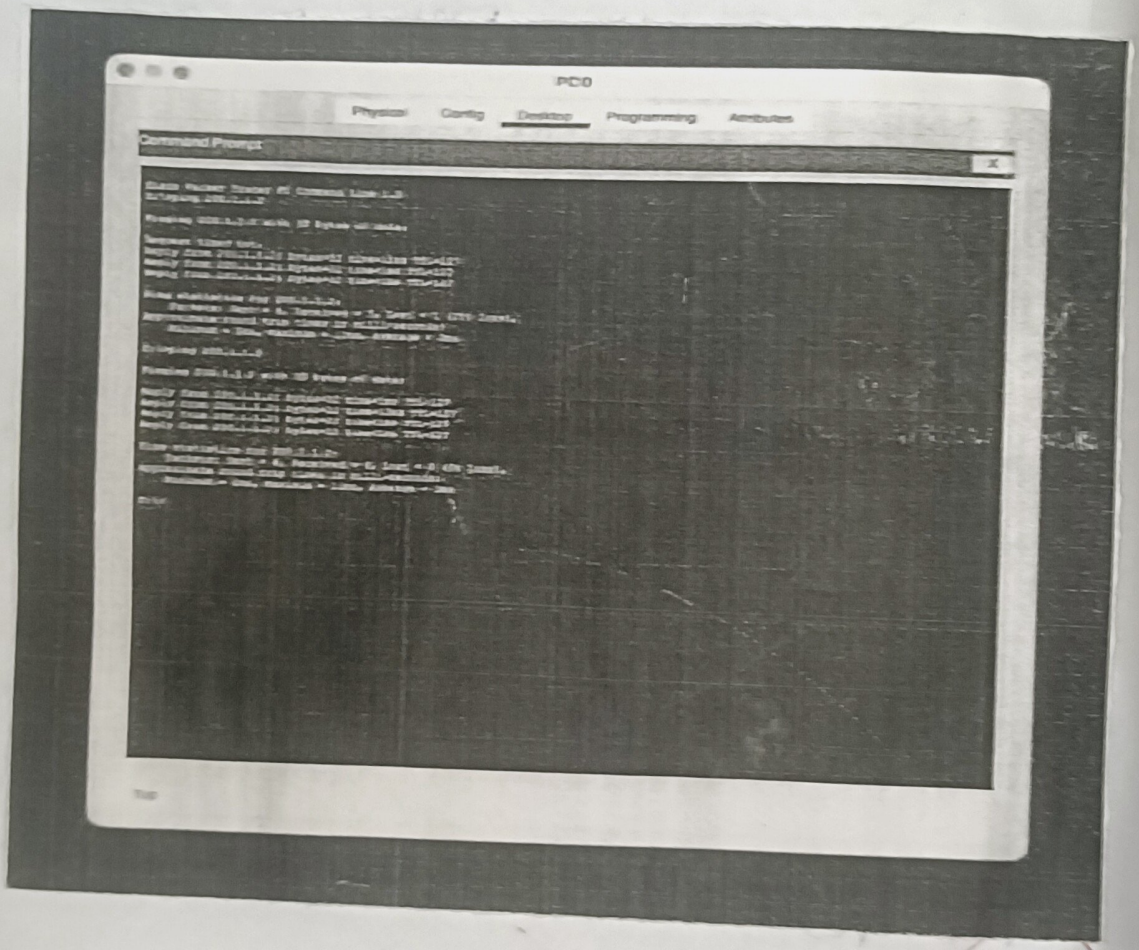

*) configure static NAT & save

*) assign IP address.

*) Test connectivity & verify nat translation & NAT statistics.

Result: Suc.

Successfully configured static NAT and verified that private IP addresses are translated to public IP addresses. Enabled communication between private and public network
